

# Business Orientation Assessment Results

This slide shows the business orientation assessment score

**Level 1**

- The Information Security Strategy was developed absent of the business context.
- No business context documentation or stakeholder interviews were used to inform the development of the Information Security Strategy.

**Level 2**

- Some business context discovery was conducted prior to Information Security Strategy development.
- The business context is documented as part of the Information Security Strategy.
- It is not clear how the target state is derived from the business context.
- Unclear linkages between security goals and the business context.

**Level 3**

- Business context discovery was conducted prior to Information Security Strategy development.
- The business context is documented as part of the Information Security Strategy, and
- The security target state is clearly derived from the business context.
- Linkage is shown as to how security initiatives and goals support the business context.

**Level 4**

- The linkage between how the Information Security Strategy will support the business is very clear.
- Readers can easily point to how security initiatives can support business goals and/or capabilities.
- Clear depiction of how the security target state is derived from the business context is present.
