

# Business Goals Assessment

## Gaps and Omissions

### Business Goal to Security Capability Alignment

- The business goals are described at a level where it is possible to identify specific security capabilities need to support the goals.
- For each business goal there are 1-3 security goals or capabilities that have been defined as required support the business goal.

### Business Goal Prioritization

- The list of business goals is prioritized, and the top 2-3 goals have been identified.

### Business Goals

- There is a list of business goals present in the Information Security Strategy.
- The business goals are derived from corporate documents OR the business goals were discovered through interviews with stakeholders.

## Recommendations:

- UofA's strategy includes evidence of a structured approach towards requirements gathering, based on their IT strategy and overall University strategy. I appreciate the way that the document cascades these requirements down through context and into strategic security goals.
