

# Goals Assessment

## Recommendations:

The goals of the strategy have been clearly articulated and address stated problems. The initiatives appear to align to the goals, however it is not clear how they all align to the organization's overall goals.

We recommend that the strategy spell out how the goals address the organizations needs. This helps to increase adoption of the strategy and help to maintain its relevance, as stakeholders will better understand the business value that the strategy provides a foundation for.

## To what degree do the goals align:

1. Does the strategy restate/summarize the overarching business goals?
2. Do the goals align to the business and an overarching IT strategy?
3. Does it speak to the current problems/driver to take the actions listed in the strategy?
4. Are the goals supported by actions/initiatives that support them?
